Iago Cunha Fabrício

Software Engineer | Backend, Generative AI & Automation

Fortaleza, Brazil | +55 (85) 98903-5010 | dev.iagocunha@gmail.com
LinkedIn | GitHub | Portfolio

SUMMARY

Backend & AI developer contributing to an enterprise AI platform at FIEC, with a pilot reaching 47 registered users, 31 users with recorded usage, and approximately 1.4 million tokens processed. Experience building Python and TypeScript APIs, an OpenAI-compatible gateway, Temporal-based agent orchestration, and RAG pipelines.

PROFESSIONAL EXPERIENCE

Sistema FIEC / Observatório da Indústria | Backend & AI Developer

Fortaleza, Brazil | Mar 2025 - Present

- Built an OpenAI-compatible gateway connecting LibreChat to enterprise agents through Temporal, with model and chat endpoints and SSE streaming responses.
- Implemented routing across four specialized capabilities and two general-purpose models, with separate RAG knowledge bases for each context.
- Built document ingestion and semantic search pipelines integrating Google Drive, embeddings, PostgreSQL, and pgvector.
- Automated enterprise workflows with n8n and APIs to reduce manual steps and operational errors.
- Implemented retries, backoff, and dead-letter queues in asynchronous workflows; delivered group-based access controls and Google Workspace/Active Directory authentication.
- Supported applications across three Kubernetes environments and contributed to pilot usage and token-consumption telemetry.

Freelance | Full Stack Developer | Jun 2024 - Present

- Build MVPs, workflow automations, and API integrations, covering technical planning, frontend, backend, and relational and non-relational databases.

SELECTED PROJECTS

Job Match Alerts | Python, FastAPI, PostgreSQL, React, TypeScript, OpenAI

Built a resume-to-job matching portfolio application with PDF uploads, URL-based job imports, LLM-assisted extraction, and explainable scoring. Includes Pytest tests and GitHub Actions CI. GitHub | Demo

Public Data Monitor | Python, FastAPI, PostgreSQL, SQLAlchemy, AsyncIO

Built an asynchronous news ingestion pipeline with a paginated REST API, URL deduplication, idempotent persistence, and retries with backoff. Includes OpenAPI documentation and Docker Compose. GitHub | API docs

TECHNICAL SKILLS

AI & Automation: LLMs, AI agents, RAG, embeddings, semantic search, prompt/context engineering, n8n.
Backend & Data: Python, FastAPI, Node.js, TypeScript, REST APIs, SQLAlchemy, Pytest, PostgreSQL, pgvector, MongoDB, Redis.
Infrastructure: Temporal, Kafka, AsyncIO, Docker, Kubernetes, CI/CD, observability, Git.
Frontend: React, Next.js, Tailwind CSS.

EDUCATION & LANGUAGES

Estácio | Technology Degree in Systems Analysis and Development | Expected Dec 2026.
Languages: Portuguese (native); English (B2, self-assessed).
